Script-Controlled ACL – Restrict Record Access Based on Field Value

Phase 8-Communication

Date: 30 september 2026

Team ID : 6ab3ed08a238dc999eb3fda5

Project Name : Script-Controlled ACL – Restrict Record Access Based on Field Value

Maximum Marks : 1 Mark

Communication Plan:

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, ServiceNow ACL configuration issues, testing results, and feedback were managed.

S.No	Communication Type	Frequency	Channel / Tool	Participants / Purpose
1	Team Standup	Daily	Team meeting / Chat	Project team – review ServiceNow configuration progress, users, roles, tables and ACL tasks.
2	Progress Update	Weekly	Chat / Online meeting	Project team – share milestone progress for user creation, table creation and ACL implementation.
3	Issue / Bug Discussion	As Needed	Chat / Screen sharing	Project team – discuss ACL configuration errors, access issues, scripts and verification failures.
4	Stakeholder Review	Bi-Weekly	Online meeting / Demonstration	Team and stakeholder – review project functionality, record security and feedback.

5	Final Demo Rehearsal	Once	ServiceNow instance / Online meeting	Project team – rehearse READ, CREATE, WRITE and DELETE ACL demonstrations.
6	Final Documentation Review	Once	Document / Chat	Project team – verify ACL steps, testing details and project outcome before submission.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Difficulty configuring ServiceNow ACL records correctly.	Reviewed Type, Operation, table name, Active status, required role, data condition and script step-by-step.
2	Need to verify access for different roles and branch values.	Used user impersonation and tested the u_institution_details list with EEE user and Admin user.
3	Different permissions were required for READ, CREATE, WRITE and DELETE.	Created separate ACLs using bb1, bb2, bb3 and bb4 and verified each operation individually.
